

## Growth Curve for Hy-Line Brown (Enriched)

House Number:
No. of Birds:
Day Old Date:
Date Housed:

It should be noted that at the time of transfer from rearing to laying, there will be some loss in body weight (which is normally in the region of 10-12%). This loss is mainly due to reduced water intake and some dehydration of the pullet. To help regain these losses, please refer to our management guide.

**Higher target weight standards used**
